

Inspecting your ring buoy for functionality and possible replacement.

Inspect ring buoy for general condition of inherently buoyant materials, such as holes, cracks, rips, and so forth.

Inspect condition of lifeline and replace as required. Exposure to UV rays may weaken the strength of the line.

Inspect retrieving line for condition and security.

Inspect the reflective tape/ material for tears or missing pieces.

Ensure that the ring buoy is orange in color (international) and stenciled with the vessel's name or number.
